

Technical Bulletin

June 2014

To: Our customer with 2200-245 Series Valves

From: Customer Services at Integrated Dispensing Systems Ltd

Subject: Upgraded 2200-245 Valve & Related Service Kits

Project: The 2200-245 series valves with a ball-end needle now have an upgraded needle and piston design (this does not affect 2200-245 series Tip-Seal valves and 2600-041 series Snuf-Bak valves). Part numbers for all valve & service kits remain the same for customer ordering convenience.

What has changed ?

The way the Needle connects with the Piston
